How many 5G base stations will China build in 2025?

China plans to construct over 4.5 million 5G base stations in 2025 while introducing additional policy and financial incentives to support industries expected to shape the next decade, the country's Ministry of Industry and Information Technology (MIIT) announced during its annual work conference.

What percentage of mobile connections will be 5G in 2025?

By 2025, one in four mobile connections is expected to be on a 5G network, with 4G expected to still have a dominant lead at 55 percent of connections in 2025. As the following chart, based on GSMA estimates, shows, Greater China is currently leading the race to 5G with 29 percent of mobile connections in the region utilizing the new standard.

Which countries will use 5G in 2025?

North America is a distant second with 13 percent adoption and Europe is even further behind at 4 percent of all mobile connections. By 2025, 5G is expected to become the predominant standard in Greater China and North America, while the rest of the world is still expected to rely heavily on 4G for the time being.

What will 5G infrastructure look like in 2025?

Consumer electronics and automotive applications are forecast to both have a 21.7% share of the 5G infrastructure by 2025. Meanwhile, industrial apps will have a 20.1% share while energy and utilities will have a 15.7% share. (Statista, 2020)
