How is the energy storage industry preparing for a grid-scale energy storage supply chain?

The energy storage industry is making significant progress in laying the groundwork for a domestic battery energy storage supply chain, building or expanding more than 25 manufacturing facilities for grid-scale energy storage. With today's investment commitment, the industry has announced plans to rapidly expand ongoing efforts.

Why is the energy storage industry important?

"The energy storage industry is providing essential power when needed most while boosting domestic manufacturing and creating jobs across the country," said Jason Grumet, CEO of ACP.

Why is DOE launching a long duration storage shot?

Today's announcement will help DOE realize its Long Duration Storage Shot goal of reducing the cost of LDES by 90 percent by 2030 and supports the Biden-Harris Administration's efforts to advance critical clean energy technologies, expand the adoption of renewable energy resources, and strengthen America's energy security.

What is energy storage?

Energy storage encompasses an array of technologies that enable energy produced at one time, such as during daylight or windy hours, to be stored for later use. LPO can finance commercially ready projects across storage technologies, including flywheels, mechanical technologies, electrochemical technologies, thermal storage, and chemical storage.

The pledge represents a more than fivefold jump in "active investments" and could enable 100% U.S.-made supply for domestic battery storage projects, the American Clean ...

The U.S. Department of Energy (DOE) has announced a \$15 million investment in three innovative energy
