Who makes the Bess battery?

Conducting the engineering and construction of the BESS is the multinational company, Equans Netherlands. Dutch energy player, Eneco, is tasked with tweaking the battery for optimal performance, enabling it to maintain the grid's balance without escalating local congestion.

Is Bess a reliable and cost-effective solution?

BESS projects can provide a reliable and cost-effective solution, but their full potential remains largely unexplored. To remedy this situation there is a need to focus significant effort on building awareness with key stakeholders to promote how investing in BESS delivers added value for utilities.

How does the Bess work?

With the BESS, you can create an energy buffer and use this energy flexibly at desired times. When power is consumed particularly during the day, the battery can be charged at night. During the day, power is then used from both the grid and the battery. In this way, we virtually increase your capacity without physically increasing your connection.

What is a Bess solution?

WEG's world class BESS solutions are capable of either co-location with variable renewable sources (PV or Wind) to reduce intermittency in supply, as well as stand-alone applications to address a host of reliability and stability issues on the grid.

WEG's world class BESS solutions are capable of either co-location with variable renewable sources (PV or Wind) to reduce intermittency in ...

Dispatch Grid Services, the Amsterdam-based battery storage solutions company, has started construction of the previously announced Dordrecht 45MW/90MWh BESS. It ...
