What is the financial model for the battery energy storage system?

Our financial model for the Battery Energy Storage System (BESS) plant was meticulously designed to meet the client's objectives. It provided a thorough analysis of production costs, including raw materials, manufacturing processes, capital expenditure, and operational expenses.

Are battery storage costs based on long-term planning models?

Battery storage costs have evolved rapidly over the past several years, necessitating an update to storage cost projections used in long-term planning models and other activities. This work documents the development of these projections, which are based on recent publications of storage costs.

What is a battery energy storage system (BESS) model?

Tailored to the specific requirement of setting up a Battery Energy Storage System (BESS) plant in Texas, United States, the model highlights key cost drivers and forecasts profitability, considering market trends, inflation, and potential fluctuations in raw material prices.

Why are battery system costs expressed in \$/kWh?

By expressing battery system costs in \$/kWh, we are deviating from other power generation technologies such as combustion turbines or solar photovoltaic plants where capital costs are usually expressed as \$/kW. We use the units of \$/kWh because that is the most common way that battery system costs have been expressed in published material to date.

The Model is, a user-friendly online tool that enables analysis, comparisons, and forecasts for battery production costs and performance by technology, company, location, and raw material ...
