-----  
Does Canada have a market for energy storage?

The market for energy storage in Canada, like that for electricity, is fragmented. Under Canada's Constitution, each province controls the electricity generation, transmission, distribution and overall market structure within its borders. Each province (and territory) therefore offers different opportunities and challenges for energy storage.

What are the market segments for energy storage?

The amount of time an energy storage system can discharge its storage capacity at its maximum rated power capacity. The market segments that would find value in installing the energy storage technology. These include the (1) grid market, (2) the industrial, commercial, and institutional (ICI) market, and (3) the residential market.

Are capacity markets a new revenue stream for energy storage?

Capacity markets offer a potential new revenue stream for energy storage and could further boost the market for energy storage where adopted. Other provinces and territories have a vertically integrated electricity market structure in which large monopolies of bundled services dominate the market.

How can energy storage systems help balancing electricity supply and demand?

Energy storage systems can be useful in balancing electricity supply and demand at the minute-level by absorbing excess supply and discharging when demand requirements exceed supply. Electricity reserves are an essential component of the grid.
