Can a conventional cement plant be used for solar thermal applications?

A conventional cement plant (Kotputli Cement Works (KCW), an UltraTech Cement Limited manufacturing unit) at Kotputli, Jaipur, Rajasthan, was investigated for solar thermal application. According to Indian Minerals Yearbook 2020, the plant produced 2.37 million tons, while the production capacity of the plant is 4 million tons.

How to integrate CST Technology in a conventional cement plant?

Best approach to integrating the CST technology in a conventional cement plant is to use solar tower system with solar reactor at the top of the solar tower or preheater tower. Additionally, the use of non-conventional sources of energy in cement production reduces a lot of anthropogenic emissions to the atmosphere.

Are cement-based energy storage systems better than conventional energy storage technologies?

While cement-based energy storage systems offer distinct advantages in structural integration, continued research and optimization are essential to enhance their cycle life and energy storage efficiency, bringing them closer to conventional energy storage technologies. Table 1.

Are cementitious-based energy storage systems a viable alternative to conventional supercapacitors?

Cementitious-based energy storage systems offer a promising alternative to conventional supercapacitors, but their practical implementation faces significant challenges. Durability and electrochemical stability are key concerns due to hydration reactions, carbonation, and environmental exposure.
