What is a solarcontainer?

Solarcontainer explained: What are mobile solar systems? The Solarcontainer represents a grid-independent solution as a mobile solar plant. Especially in remote areas it can guarantee a stable energy supply or support or almost replace a public grid with strong power fluctuations, as well as diesel generators that are used.

How will Nuru power Congo?

With the money, Nuru will increase its urban microgrids in Congo to four, from one, and be able to produce 13 times as much electricity. The company eventually hopes to provide millions of Congolese with cheaper and more reliable electricity than what is produced by the diesel generators that most now use.

Can a solar container be used as a power generator?

In order to be able to use the high PV output when there is limited sun exposure, the solar container can also be used in combination with an energy storage device. Especially in completely self-sufficient applications, diesel aggregates are often used as power generators.

Where can a solar container be used?

Possible locations are therefore remote villages, development and crisis areas, mining, venues or deployments in extreme weather events. In order to be able to use the high PV output when there is limited sun exposure, the solar container can also be used in combination with an energy storage device.
