-----

This paper presents a European-wide techno-economic and environmental assessment of retrofitting 5G macro-cell base stations with grid-connected solar photovoltaic ...

Building on previous life cycle assessments of seven PV module types and six mounting structures, this study develops a system-level framework to evaluate the ...

Emerging markets in Africa and Latin America are adopting mobile container solutions for rapid electrification, with typical payback periods of 3-5 years. Major projects now deploy clusters of ...

To ensure the sustainability of solar energy projects, conducting environmental impact assessments is crucial. These assessments involve a comprehensive process of ...

The standard information database on the official website of CarbonNewture covers international standards, domestic standards, regional standards and group standards ...

this study considers the aim of the green container terminal concept to achieve state-of-the-art port construction in line with the characteristics of environmental health, ecological protection, ...

In this whitepaper, we delve into the transition to green terminals. By conducting a literature review, we explore various operational strategies.

In recent years, there has been a relevant increase in research and attention to greening ports. This growing interest includes the development of effective strategies and ...
