How much does a high temperature sensible thermal energy storage system cost?

Table 1. High temperature sensible thermal energy storage system studies for CSP plants. For DMT systems, Pacheco et al. (2002) reported a specific cost of 21 US\$/kWh th (i.e. the total cost of TES divided by the storage capacity) for a DMT tank filled with Quartzite compared to a 30 US\$/kWh th specific cost in two-tank molten salt systems.

Do alternative thermal energy storage systems have a techno-economic advantage?

We propose herein that the true techno-economic advantage (or lack thereof) of choosing alternative TES systems should be judged by a 'normalized cost of thermal energy storage (NCOTES)' which normalizes the cost of storage systems with regards to their annual electricity generation capacity.

Can thermal energy storage systems be used for solar power plants?

How much does a thermal energy storage system cost?

At present, considering an average storage cost of 22 US\$/kWh th for the commercial thermal energy storage system in CSP plants, the cost of TES systems for utility scale applications is still ~30-150 times lower than that of electricity storage systems (Lai and McCulloch, 2017, Luo et al., 2015).

These benchmarks help measure progress toward goals for reducing solar electricity costs and guide SETO research and development programs. Read more to find out how these cost ...
