What will the Czech electricity storage scheme do in 2025?

In an announcement released on March 7, 2025, the executive arm of the European Union said that the Czech scheme will support the installation of at least 1.5 GWh of new electricity storage facilities. The measure will be open to all storage technologies directly connected to the transmission network or distribution network.

Is the Czech Republic ready for pumped-storage hydroelectric power plants?

Bulk energy storage is currently dominated by hydroelectric dams, both conventional as well as pumped. There are six localities considered for new pumped-storage hydroelectric power plants in the Czech Republic but public acceptance presents a challenge. Front-of-meter installations in the Czech Republic are mired in regulations.

What is the Czech energy mix?

While the goal of EU funds is to support a sustainable low-carbon-emission economy and ensure energy security by utilizing alternative energies, the Czech approach is different. As described in the State Energy Policy, the future Czech energy mix will be primarily based on nuclear power with a goal of reaching 50% of the energy supply with nuclear.

Will a battery storage system help Czech companies achieve net zero?

The high penetration of renewable generation projects in the region could deliver a large amount of clean energy and really accelerate the journey to net zero, but at the moment Czech companies are not in a position to reap the full benefits of solar and other renewable energy sources. To do so, battery storage will be essential.

With EUR279 million EU funding pouring into its grid modernization [1], the Czech Republic is rewriting its energy playbook. Let's explore how this Central European nation is ...

How can Czech organisations make the most of their renewable generation assets? Here's a review of energy

storage in the Czech market.

Boosting energy storage will allow Czechia to improve its energy security and reduce reliance on gas and coal imports, two key sources in its current energy mix. Moreover, ...

It will be open to all energy storage technologies that are directly connected to the transmission or distribution network, and will ...

As described in the State Energy Policy, the future Czech energy mix will be primarily based on nuclear power with a goal of reaching 50% of the energy supply with ...

With EUR279 million in EU funding approved for 1500MWh of new energy storage capacity, the country is set to double its current storage capabilities and accelerate its ...

China's AlphaESS has signed a cooperation agreement with EPC partner Eltodo a.s. to deliver a combined 320 MWh of utility-scale battery energy storage systems (BESS) ...

In an announcement released on March 7, 2025, the executive arm of the European Union said that the Czech scheme will support the installation of at least 1.5 GWh of ...

The European Commission has approved a EUR279 million (CZ 7 billion) Czech scheme to support investments in electricity storage facilities to foster the transition towards a net-zero economy.

In the form of battery storage, we will provide you with the functioning of the essential infrastructure necessary for the operation of your facility. Our solution is suitable for industrial ...

It will be open to all energy storage technologies that are directly connected to the transmission or distribution network, and will support the European Commission's 2024-2029 ...

With EUR279 million in EU funding approved for 1500MWh of new energy storage capacity, the country is set to double its current ...
