Since the electrochemical and chemical industry was developed on the territory of today's Bosnia and Herzegovina in the period from 1950 to the 1980s, researchers and professors were ...

Some of the energy found in primary sources is lost when converting them to useable final products, especially electricity. As a result, the breakdown of final consumption can look very ...

Discover how Bosnia and Herzegovina's first large-scale electrochemical storage project is reshaping regional energy infrastructure while creating opportunities for international ...

Licensing and feasibility studies are already underway - the goal is to create a modern, resilient and green energy infrastructure. This is not only a technological ...

What are lithium-ion batteries used for? Not only are lithium-ion batteries widely used for consumer electronics and electric vehicles, but they also account for over 80% of the more ...

This paper gives a comprehensive analysis of the economic viability of two of the currently most cost-effective electricity storage technologies: pumped hydro storage (PHS) ...

Energy production in Bosnia and Herzegovina is carried out using primary energy from solid fuels, wood biomass, hydropower, as well as other forms of RES (solar and wind energy).

Abstract The aim of this paper is considering a brief historical perspective and overview of recent ideas and directions in electrochemistry in Bosnia and Herzegovina.

The research evolved from polarography in the beginning to electrochemical deposition and/or dissolution of

metals, alloys, polymers, nanocomposites and deposition of ...

The plan should contain clear definitions of targets for renewable energy sources, reducing final energy consumption, primary energy supply, and greenhouse gas emissions from the energy ...
