These innovative CO2 batteries from Energy Dome promise long-duration energy storage for the grid, and reliable 24/7 clean power for data centers.

Scientists at the University of Surrey have made a significant advance in eco-friendly battery technology, developing a system that not only stores more energy but may ...

The concept of CO2 battery efficiency is particularly exciting because it offers a way to capture and reuse CO2 emissions while providing reliable energy storage - a win-win for ...

Unlocking its secrets could thus enable advances in efficient energy production, electronics cooling, water desalination, medical diagnostics, and more. "Boiling is important for ...

Li-CO₂ batteries with a theoretical energy density of 1,876 Wh kg⁻¹ are attractive as a promising energy storage strategy and as an effective way to reduce greenhouse gas ...

MIT engineers developed a membrane that filters the components of crude oil by their molecular size, an advance that could dramatically reduce the amount of energy needed ...

The MIT Energy Initiative's annual research spring symposium explored artificial intelligence as both a problem and solution for the clean energy transition.

While it would reduce carbon footprint on paper, it would cause an increase in CO2 in Earth's atmosphere by an estimated 3,509 tonnes. The real-world impact of such an ...

Liquid air energy storage could be the lowest-cost solution for ensuring a reliable power supply on a future

grid dominated by carbon-free yet intermittent energy sources, ...

While the focus of the battery industry and policymakers was previously on reducing the cost of LIB and their usage reducing CO2 emissions through e-mobility and the integration ...

Growing energy demand means the U.S. will almost certainly have to expand its electricity grid in coming years. What's the best way to do this? A new study by MIT ...

Giving people better data about their energy use, plus some coaching, can help them substantially reduce their consumption and costs, according to a study by MIT ...

In MIT course 15.366 (Climate and Energy Ventures) student teams select a technology and determine the best path for its commercialization in the energy sector.

MIT researchers developed a new fabrication method that could enable them to stack multiple active components, like transistors and memory units, on top of an existing ...

Lithium-carbon dioxide (Li-CO₂) batteries could be a two-in-one solution to the current problems of storing renewable energy and taking carbon emissions out of the air. They ...

Scientists at the University of Surrey have made a significant advance in eco-friendly battery technology, developing a system that not ...
