---

This advanced inverter series boasts a maximum charge/discharge current of 100A + 100A across two independently controlled battery ports. It features 10 integrated MPPTs, each supporting a ...

Migration from GD3160 gate driver to GD3162 with dynamic gate strength to improve efficiency for SiC MOSFET. Moreover, it includes new system features such as power device health ...

Its core purpose is to prevent the risk of electric shock and secondary hazards caused by residual voltage in the high-voltage system, ensuring the safety of personnel during ...

High-voltage DC links are central to a wide range of power electronic systems in electric and hybrid vehicles--including inverters relying on large capacitors (e.g 1 mF) to ...

Migration from GD3160 gate driver to GD3162 with dynamic gate strength to improve efficiency for SiC MOSFET. Moreover, it includes new system ...

High voltage inverters offer several advantages, including improved efficiency and reduced transmission losses. They are designed to handle higher voltage levels, allowing ...

This advanced inverter series boasts a maximum charge/discharge current of 100A + 100A across two independently controlled battery ports. It features ...

Active Discharge SCR for 400V battery.

Explore Eaton's high-voltage inverter converts direct current (DC) from the batteries or generator to alternating current (AC) to power the traction drive motors.

Its core purpose is to prevent the risk of electric shock and secondary hazards caused by residual voltage in the high-voltage ...

A traction inverter system often requires a high-voltage power supply, which converts power from the high-voltage battery and connects to the low-voltage side creating a redundant power path ...

The DC-Link capacitor is a part of every traction inverter and is positioned in parallel with the high-voltage battery and the power stage (see Figure 1). The DC-Link capacitor has several ...

The proposed solution has a higher discharge rate and reduces the voltage overshoot on the DC-Link capacitor. The proposed hardware is verified using the simulation and experiments ...
