How much does a solar inverter cost?

Most solar panel contractors charge around \$50 to \$100 per hour. You may save \$1,000 to \$2,500 up-front by choosing a string inverter over a microinverter or hybrid inverter. A solar inverter costs \$2,000 on average, with prices often ranging from \$1,000 to \$3,000. That said, some homeowners spend as little as \$800 or as much as \$5,000.

How much does a Chinese inverter cost?

With April's import duties, Chinese inverter prices have climbed by roughly a third. For example, a Chinese string inverter that was \$0.15/W may now be offered around \$0.20/W (reflecting the 34% duty). In absolute terms, a 5 kW (5000 W) inverter unit that cost \$1,000 might increase to ~\$1,330 after tariffs if sourced from China.

How do I choose a solar inverter?

Stick with a string inverter. Lower overall cost, fewer moving parts. Match the inverter to the system size, don't overspend. Choose one with at least a 10-year warranty. Ask your solar installer to quote two or three options. If you might expand your system, size the inverter accordingly.

What size solar inverter do I Need?

The inverter's capacity should closely match the DC size of your solar panels. For example, a 6 kW solar array typically pairs with a 6 kW inverter; however, slightly smaller or larger inverters may be used, depending on the system design.

Upgrade your solar system in San Jose, CA with smart inverters from CalPacific Power. Improve energy efficiency, grid stability, and maximize your savings.
