K9 (BK7) is a common borosilicate glass with a transmission range of 350nm~2100nm. It has high homogeneity and low content of bubbles and impurities. It can be directly used as a material ...

K9 glass is an optical glass due to its exceptional clarity. Consequently, numerous manufacturing facilities have adopted K9 material as a raw material, and the processed ...

With excellent mechanical strength, chemical resistance, and thermal ...

With excellent mechanical strength, chemical resistance, and thermal stability, K9 glass is widely used in precision optics, laser applications, and optical instruments. Its high transmission in ...

?Premium K9 Crystal & 3D Laser Engraving?The solar system crystal ball is made of top-quality K9 crystal, with no impurity, no scratch, flawless quality, and no bubbles. ...

Optical glass flat with coating can improve light penetration strength while also being waterproof, dustproof, and scratch-proof. Our k9 Windows are ...

The letter "K" is a reference to the German word for "crown" (Krone) and the number 9 refers to the lead oxide content of the glass (9%). K9 glass has high optical clarity, and is used in many ...

Optical glass flat with coating can improve light penetration strength while also being waterproof, dustproof, and scratch-proof. Our k9 Windows are utilised by scientific and industrial ...

(picture show of our K9 glass window) This kind of optical windows-ultraviolet windows are often used with laser instruments or other applications in medical, industrial and defense areas.

K9 optical glass is a high boric silicon glass having primary hydrolyzable properties, has a high chemical stability, strong transparency, and high refractive index, and has good processability.

Price and other details may vary based on product size and color. Need help?

Solar Power Prisms is used to collect the sunlight, for solar condenser, solar energy concentrating photovoltaic (CPV) system, solar power generation, etc., which is the main optical component ...
