-----  
What is a containerised generator set?

On a regular basis, containerised generator sets (CGS) are placed on board ships to provide replacement power in case of a damage to one of the ship's generator sets, or additional power, e.g. to provide power to extra deck equipment or reefer containers. There are currently no clear rules and requirements for such time limited installations.

What are the rules & restrictions for heavy haul generator shipments?

When shipping a heavy haul generator, you may face several rules and restrictions. These include route restrictions, where certain roads may be off-limits, requiring your shipping company to make adjustments as needed.

Do reefer containers need a genset?

When stored, reefer containers are typically plugged into an electrical socket, to ensure that the refrigeration unit is adequately powered. A genset (generator set) is an external generator that powers the refrigeration unit of a reefer container.

Are generators safe during transportation?

Ensuring that generators remain safe and upright during transportation is a top priority. Especially for generators with fuel in the tank, it's crucial to follow safety measures. Many generators exceed standard shipping dimensions and are classified as oversized, requiring heavy haul shipping regulations to be followed.

Most generator types are permitted for international shipping, provided they comply with all relevant safety and regulatory requirements. However, certain restrictions may apply based on ...

There are numerous steps involved when it comes to shipping generators. Ensuring that generators remain upright and safe during ...
