-----

Amsterdam, January 12, 2024 - GIGA Storage is pleased to announce the development of the Green Turtle project, a groundbreaking energy storage project with 600 MW of power and ...

Riga Energy Storage Power Production stands at the intersection of technological innovation and sustainable energy transition. By addressing grid challenges and leveraging cutting-edge ...

As we approach Q4 2025, Riga's storage capacity is projected to triple, potentially eliminating the need for one natural gas peaker plant entirely. Now that's what we call powering progress!

Given Latvia's high share of renewable electricity, the need for electricity storage technologies will increase significantly. However, there ...

The main aim of this research is to build and validate the basic structure of the system dynamics model for PV and battery diffusion in the household sector. A system dynamics model ...

From 1 January 2023 Latvia banned the import of natural gas from Russia. The replacement comes from connections to LNG terminals, the Klaipeda LNG terminal in Lithuania, and from 2024 the recently opened Inkoo LNG terminal in Finland. JSC Conexus Baltic Grid is the natural gas transmission system operator in Latvia. International transmission pipelines are 577 km long, consisting of the Riga-Pahneva, Pleskava-Riga, Izbors...

Integration of energy storage systems in addition to decentralized renewable energy production, for example, by solar panels, leads to more effective electricity supply and ...

This assumes that, if renewable power did not exist, fossil fuels would be used in its place to generate the

same amount of power and using the same mix of fossil fuels.

Renewable energy includes wind, solar, biomass and geothermal energy sources. Almost half of the electricity used in the country is provided by renewable energy sources.

Looking to 2030, Riga plans to deploy liquid air storage - essentially bottling winter cold for summer AC use. It's like making snowballs in July, but for real energy savings.

Given Latvia's high share of renewable electricity, the need for electricity storage technologies will increase significantly. However, there are also challenges, such as the need ...

With variable energy resources comprising a larger mix of energy generation, storage has the potential to smooth power supply and support the transition to renewable ...
