-----

In 2022, the team aims to carry out a high-altitude flight powered exclusively by solar energy, seeking to reach the stratosphere with an altitude of 20,000 meters.

In 2022, the team aims to carry out a high-altitude flight powered exclusively by solar energy, seeking to reach the stratosphere ...

According to the official SolarStratos press release, the mission's latest feat used the highly modified solar airplane powered by a 22 square-meter array of solar cells and ...

However, during this record-breaking flight, Domjan relied solely on solar energy and thermal currents for propulsion. This reliance on renewable energy sources showcases ...

In 2022, the team aims to carry out a high-altitude flight powered exclusively by solar energy, seeking to reach the stratosphere with an altitude of ...

Success would not only establish a new altitude record for solar-powered flight but also validate the feasibility of long-duration, ...

Aiming to promote renewable energy to protect our planet's climate from the effect of greenhouse gases, the team's next big step is hoping to reach the stratosphere in 2022 with ...

Success would not only establish a new altitude record for solar-powered flight but also validate the feasibility of long-duration, emission-free aerial operations.

At Airbus, we are working to use this alternative renewable energy source to power high-endurance

stratospheric flight. Our advances in solar cell technology enable unmanned aerial ...

Falcon Solar presents a groundbreaking approach to renewable energy by generating power from high-altitude solar aircraft.

A Swiss pilot just blasted past 31,000 feet on pure sunlight, appearing to break the existing solar-flight altitude record and proving the future of aviation can run on clean energy.

Solar energy, which can be converted into electrical energy through photoelectric cells, plays an important role in the endurance performance of high-altitude airships.

According to the official SolarStratos press release, the mission's latest feat used the highly modified solar airplane powered by a ...

At Airbus, we are working to use this alternative renewable energy source to power high-endurance stratospheric flight. Our advances in solar cell ...

In 2022, the team aims to carry out a high-altitude flight powered exclusively by solar energy, seeking to reach the stratosphere with an altitude of 20,000 metres.
