-----

As California works towards its ambitious clean energy vision, an almost counterintuitive challenge has emerged: The state is, at times, generating more solar than it ...

For solar-plus-storage--the pairing of solar photovoltaic (PV) and energy storage technologies--NLR researchers study and quantify the economic and grid impacts of ...

One of the US's largest solar + battery storage projects is now fully online in Mojave, California.

California can add 53 GW of clean energy capacity through surplus interconnection, including 36 GW of solar, 17 GW of wind, and 26 GW of energy storage at existing sites without new ...

The Eland Solar-plus-Storage Center project alone will generate enough power to serve more than 266,000 homes in Los Angeles and push the city's clean energy share above ...

As California works towards its ambitious clean energy vision, an almost counterintuitive challenge has emerged: The state is, at times, ...

Many utilities have embraced gas, or promoted restarting closed coal or nuclear plants, but that overlooks the cheapest and fastest-to-build option - solar energy combined ...

He emphasizes that California's solar production has increased nearly twentyfold over the past decade, powering millions of homes with clean energy. The state is also rapidly ...

In late afternoon, when the sun stops hitting solar panels and people are home using electricity, batteries now push stored solar energy onto the grid. California has invested ...

Storing this surplus energy is essential to getting the most out of any solar panel system, and can result in cost-savings, more efficient energy grids, and decreased fossil fuel emissions.

By pairing utility-scale solar with advanced energy storage technology, Eland delivers low-cost electricity to meet LA's growing energy needs -- including when demand ...
