-----  
How much do state energy storage incentives cost?

o At the time of this report, average residential/small commercial energy storage incentive rates for the state programs examined ranged from \$350/kWh to \$1,333.33/kWh, with a mean rate of \$805/kWh. o State policymakers should consider combined up-front and performance-based incentives.

Are there home energy storage incentives?

Yes, there are home energy storage incentives for those who do not live in eligible communities and high fire-risk areas. The approved developers will be able to discuss the Self-Generation Incentive Program general market incentives still available to all customers.

What are the different types of energy storage incentives?

In addition, there are other types of energy storage incentives that have been tried. For example, storage may be added to existing renewable programs, such as solar incentive programs, or be made eligible for market-based programs such as utility renewable portfolio standards (RPS).

Are state incentives necessary to increase distributed storage deployment?

o Despite all these variables, numerous studies as well as experience have shown that until energy markets mature, battery prices fall, and currently non-monetizable energy storage services become monetizable, state incentives are a necessary and critical key to increasing distributed storage deployment.

While federal subsidies often grab the headlines, state and local governments are major players, tailoring their support to local economic needs. This creates a complex patchwork of ...
