Why did Rotterdam need a power grid?

In the case of the Port of Rotterdam specifically, demand was predicted to increase by a factor or two and possibly even four. This meant that Rotterdam had to reinforce its power grid while there was only limited space for additional infrastructure.

Does the port of Rotterdam have a sustainable future?

The Port of Rotterdam and its industrial complex had already taken steps to align their operations with the sustainability imperative that was now becoming more and more salient not only in government circles but among consumers as well.

Why does Rotterdam need more sustainable power?

With sustainability high on the public agenda, and with the government determined to curb CO2 emissions to comply with the Paris Climate Agreement (Appendix A), the Port of Rotterdam realised that in order to stay competitive it needed to find more sustainable ways of powering its energy-intensive operations.

What is a smart grid in Rotterdam?

In 2013 the Port of Rotterdam started investigating the 'Smart Grid' concept as a new energy model to reduce the dependence on traditional grids and the risk of supply interruptions.

For the battery storage system, RWE is installing lithium iron phosphate (LFP) batteries in three shipping containers on the site of its Moerdijk power plant. The storage ...

In the Port of Rotterdam, this innovative solution helps regulate short, high-frequency power peaks caused by lifting heavy loads.
